Continuation of Disposition of Claims: Claims pending in the application are 1-8,11-15,17-25,27,28,45-48,50-55,57-65,67-70,72-76,78 and 80-84.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 3-8, 11-12, 15, 25, 27-28, 69-70, 72-76, 78, 80,
- 82-84 are rejected under 35 U.S.C. 102(b) as being anticipated by Flores (U.S. 5701751).

Flores discloses in Figs. 1-11 a device in the field of applicant's endeavor. Flores emphasizes the need of actively cooling a downhole logging tool electronics (col. 4, lines 61-62). Flores discloses a thermal component (heat generating component) 37 in a hot borehole environment, in thermal communication with a hot heat exchanger 24, 39 a thermal conduit system (heat pipes) 43 thermally coupling the heat exchanger 39 with a low tank (heat storage/heat sink) 50 of water (eutectic heat phase change liquid) and all within a Dewar flask/ thermal barrier/jacket (col. 5, line 47). The heat storage 50 is capable to manage the temperature of the component by removing/absorbing an excessive heat from the component when necessary and storing the heat and dissipating the heat. The heat sink/heat storage 50 absorbs heat from the overheated thermal component. The heat storage stores the heat for some time till a cooling liquid in the heat storage boils (phase change to steam/gas), and, thus, the heat storage reaches its capacity. Then, the heat from the heat storage is removed by a compressor pumping (pump) the heat/steam from the cooling agent in the heat storage, and condensing the steam into the cooling agent. The device, inherently, has a valve, for controlling the cooling fluid flow. It is also

Art Unit: 2859

inherent, that, as shown above, the system is working as a closed loop system. The thermal component is a heat-generating component that overheats during operating or, inherently, when the environment (borehole) overheats.

The heat exchanger, the heat storage and the thermal conduit are located in the downhole tool.

The method steps will be met during the normal operation of the device stated above.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flores in view of Boesen (U.S. 4375157).

Flores discloses the device/ method as stated above.

Although Flores teaches a Dewar flask thermal insulation, Flores does not explicitly teach all the limitations of claims 13-14.

Boesen discloses a device in the field of applicant's endeavor including a vacuum insulated (evacuated) Dewar flask container.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the device disclosed by Flores, so as to have a vacuum insulated/ evacuated thermally insulated container, as taught by Boesen, so as to better control the temperature of the cooling fluid, and thus, to achieve sufficient thermal component cooling.

Page 4

5. Claims 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flores. Flores discloses the device/ method as stated above.

Flores does not explicitly teach a plurality of heat exchangers and the particular sized pump.

With respect to claim 17: having a plurality of heat exchangers, absent any criticality, is only considered to be an obvious modification of the system disclosed by Flores. While the addition of multiple heat exchangers to the concept of Flores undoubtedly makes the invention more useful with a plurality of heat exchangers, it is not the type of innovation for which a patent monopoly is to be granted. See In re St. Regis Paper Co. v. Bemis Co., Inc., 193 USPQ 8, 11 (7th Cir. 1977).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system disclosed by Flores, so as to have a plurality of heat exchangers, so as to provide the operator with fast and efficient cooling system.

Claims 17-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flores in 6. view of Drube et al. (U.S. 6799429) [hereinafter Drube].

Flores discloses the device/ method as stated above.

Flores does not explicitly teach a plurality of heat exchangers parallel or in series, as stated in claims 17-24.

Drube discloses a cooling device comprising a section of parallel-connected heat exchangers and a section of serially connected heat exchangers that provide a maximum fluid flow capability.

Art Unit: 2859

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system disclosed by Flores, so as to have a plurality of parallel and serially connected heat exchangers, as taught by Drube, so as to provide a maximum fluid flow capability, as already suggested by Drube.

Allowable Subject Matter

7. Claims 2, 73, 81 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 45-48, 50-55, 57-65, 67-68 are allowed.

Response to Arguments

8. Applicant's arguments filed on July 11, 2006 have been fully considered but they are not persuasive.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gail Verbitsky whose telephone number is 571/272-2253. The examiner can normally be reached on 7:30 to 4:00 ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego Gutierrez can be reached on 571/272-2245. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
